Re: November 2006 Monthly
Report

Dear Mr. Thompson:

This letter serves as the monthly progress report for November 2006, in accordance with Section X, Paragraph 29 of the RD/RA Consent Decree for the Tronox site, in Soda Springs, Idaho.

November Activities

The closed facilities at the site were inspected in November. The covers and fences on the calcine cap and landfill were examined and are in good condition. The gates are closed and locked. The landfill sump was not pumped in November because it was pumped dry in October.

The 10-acre pond was inspected in November. The gates to the pond are closed and locked and the fence is in good condition. The 10-acre pond currently contains approximately 8.5 inches of water, measured at the south end of the pond. Tronox is continuing to investigate methods to minimize the head in the pond and to accelerate evaporation of the brine as part of closing the 10-acre pond.

The results of the October 2006 sampling were received from the lab. These data results are currently under review.

December 2006/January 2007 Activities

During the months of December and January, Tronox will continue to monitor the cap, landfill and the 10-acre pond, weather permitting. Tronox will measure the water level in the landfill sump when accessible during the winter months. Preliminary design of a contingency pond will be considered to accommodate residual water in preparation for the closure of the 10-acre pond in 2007.

The October 2006 ground and surface water quality sampling results will be evaluated in conjunction with historic data. These results will be appended to the RD/RA
